CREATIVITY OF YOUR BRAIN

We are aware of the fact that brain is an essential part of our body. It is responsible for one's thoughts and feelings. It is that part of our central nervous system that includes all the higher nervous centres. The brain helps in boosting our creativity and a lot more things that you may or may not be aware of. Here are some interesting facts about your brain:

- Your brain is more active while we're asleep.
- When you are tired your brain work faster.
- A modern brain will retain up to 1 quadrillion pieces of information.
- Introversion and extra version form wiring in the brain.
- Your brain doesn't have pain receptors.
- During pregnancy, a women's brain will shrink.

It tells how dedicated your brain is, towards it's functioning. Stress interrupts the functioning of the brain therefore, the people are advised to avoid stress. Your ability to think and creativity hikes when your brain is under no stress. And creativity enhances the quality of your work. One should always try to be more creative, it helps you open up to new ideas and thoughts.
