SUN SIGNS & CREATIVITY

Creativity is what? It is bringing to fore the expressions of the artistic being who resides in all of us and this artistic being has got different expressions residing in different individuals. So all of us have an individual creative self. There are several factors determining this individuality and the most important of these factors is position of the sun at the time of birth or in simple words our sun sign.

Every sun sign has its own preferences, tastes, inclination, focus etc. Aries artists tend to invent new and modify the original art, this makes them born innovators. Taurus people have a strong inclination towards perfection and they are classic art lovers. Gemini artists are informed thinkers and are highly productive plus they can sell what they produce. Cancerians put their emotions and intuition into words or images. The Leo artist is quite good at performance art, music, stand-up comedy and other stage based creativity expressions. Virgo folks are individualistic and they have a quite rich inner self that reflects in their art works. Librians are resourceful and steady cooperative members in an art group who like 3D art forms. Scorpio artists enjoy quiet and solitary work and give out emotionally compelling art pieces. Sagittarians are a vibrant group of people who express themselves through vivid colours and strong imagery. Seeing their efforts being recognised, Capricorns produce volumes of amazing expressive art. Aquarians tend to give more output when they are connected to a supportive creative group. Pisces known for their imagination have unique vision and style that reflects in the masterpieces they make. Now as you know your sun sign attributes, use these to light up your creative spark and let your artistic being do the talking.
