

A.N ENTERPRISES

SUPPLY OF BUILDING MATERIAL

ABOUT US

A N Enterprises is a company that trades in quality construction material such as Aggregate/Rodi, Coarse Sand. Formerly known as "Chacha Transport Company", we have been in the business of supplying construction materials for both government as well as private projects for the last 20 years and have ensured the satisfaction of our clients throughout these years. With a powerful fleet of 12 trucks that are owned by us and 25 other outsourced vehicles we meet assigned targets because we, at A N Enterprises, understand the value of time for our clients. We trade in only the best quality Aggregate/Rodi and Coarse Sand that has already been tested and trusted before. Our services have been used by various constructors for building apartments, high rise buildings, metro rails, and roads. We have worked with many government projects to improve the infrastructure and development of many locations in Delhi NCR.

The annual turnover of A N Enterprises has been increasing rapidly every year. We have been expanding our business ceaselessly ever since the company's formation, and the turnover has now reached to over Rs. 22 crores. Today we have VAT registrations in four major states namely: Delhi, Rajasthan, Haryana and Uttar Pradesh. We are presently supplying construction material from Kotputli, Raipur in Uttarakhand and Nangal in Haryana to various projects in Delhi NCR to build highly durable structures. We have been supplying construction materials to many major construction companies for infrastructure projects and we make sure that our material is in accordance to all standard specifications so that no compromises are made with respect to the quality and safety of any foundation our material is used in.

VISION

To be the leading supplier of building material for construction projects all over the country.

MISSION

To provide high quality construction materials to builders and ensure durability of the structures.

CORE VALUES

A N Enterprises works on a set of core values that guide us in improving our services and making us a successful company. The philosophy followed by us is reflected in the following points:

- **Reliability**

A N Enterprises acts as being a trusted and reliable vendor, which can be trusted upon by its clients. We aim to work according to the specific requirements of our clients, delivering them with just what they require.

- **Transparency**

A N Enterprises ensures complete transparency and keeps clients in the loop about the status of their orders. For any grievance, our executives can be contacted and we promise to resolve your problems.

- **Punctuality**

A N Enterprises ensures on time delivery of orders so that companies can carry out construction work on schedule without any hassle.

AGGREGATES

Aggregate is a very important construction material used to strengthen the basic foundation of a building or structure. A N Enterprises offers a range of construction Aggregates for our clients to choose from according to their needs. We offer to supply in bulk, the best quality Aggregate for your projects in building any kind of structures. All our Aggregates meet the defined Indian standards thus enforcing our core values about quality. Our transport teams pick up the Aggregate from the source and supply it safely in time to the desired point.

AGGREGATE PRODUCTS

There are three types of Aggregate products supplied by A N Enterprises. Namely:

- Granular Sub Base (GSB)
- Coarse Aggregate
- Manufactured Sand

Each type has a different purpose in construction. Manufactured sand has highly consistent and controlled particle size and gradation. It can be used to replace Natural sand in making concrete to give better results and can be used to increase compressive strength of the concrete by reducing the voids in it. Since manufactured sand is highly consistent, it results in optimum mix design. Unlike natural sand, it does not contain organic impurities. This reduces alkali Aggregate activity to a great extent and hence avoids cracks in the concrete. Manufactured sand has low levels of water absorption and helps improve cement utilization during construction. Lastly, manufactured sand is made from a single abundant source and is thus, easy to produce, making it available all year round.

QUALITY OF AGGREGATES

The quality of Aggregate that we provide is better than most others available in the market. Our Aggregate samples are continuously tested according to Indian standards to ensure high quality. IS 2430 Sampling, IS 2386 Testing and IS 383 Aggregates for concrete. This is a consistent process followed by A N Enterprises on all the products that are supplied.

Settings of all equipment used for feeding, crushing and screening are regularly monitored by us to help achieve a consistent end product for us to deliver. We keep a better control on particle size distribution, improved grading of all Aggregates, Granular Sub Base (GSB), coarse Aggregate and manufactured sand analysis is done every day. Stockpile management and loading control is also closely monitored by us to eliminate any contamination and segregation while transporting. We ensure that the deposits that are used to make Aggregate are selected carefully since such intrinsic parameters have a huge impact on the quality of the Aggregate.

COARSE SAND

A N Enterprises supplies very fine Coarse Sand extracted from high quality sources. There are many reasons that the Coarse Sand (or badarpur in common language) that we, at A N enterprises, supply is better than most:

- It passes through a sieve with clear openings of about 3.175 mm.
- It is free from organic and vegetable matter.
- It is chemically inert.
- The sand grains of our Coarse Sand are contains sharp, angular and durable.
- It does not attract moisture from the atmosphere.
- It is well graded and contains particles of various sizes in suitable proportions.
- The Coarse Sand that we supply is free from coatings of clay and silt.
- It is pure and durable. It undergoes many tests and procedures to ensure quality. The concretes and mixtures that are made from it are strong.

OUR ESTEEMED CLIENTS

We at A N Enterprises have had the honour of serving many renowned clients in the past and we have successfully been able to satisfy them with our range of construction material. We hope to continue serving them in the future and also obtain new clientele as we move forward. Some of the companies we have worked with are:

QUALITY ASSURANCE

We at A N Enterprises provide full quality assurance. We believe that quality of our building materials is of utmost priority. Hence, we only deal in construction material that has already been tested before using. Our services have been used for supplying large amounts of bulk material for big projects such and high rise buildings, metro lines, apartments many others. To ensure the timely delivery for the completion of such large scale and important projects is a huge responsibility. We at A N Enterprises have been successfully carrying out these tasks for the last 20 years and we have been expanding our outreach and resources to keep up with the increasing demand. With a strong fleet of trucks with trusted and qualified drivers and VAT registrations in various states we try to ensure that all trade work is carried out smoothly with no hurdles.
