APRMIT
TECHNOLOGIES PRIVATE LIMITED

Security

We provide best in class security and surveillance products/ solutions that allows you to safeguard your business. With our high quality, reliable and efficient Video surveillance, Access Control System, Time Attendance management system, RIFD System and Under Vehicle Surveillance system, you can prevent fraudulent practices, unauthorized access and a host of other secret as well as illegal attempts to ruin your business or reputation. Designing of the security network diagram is carried out at the initial stage of the

commencement of work, which is followed by the proper deployment strategy.

With the dedicated team of Aprmit Technologies Pvt. Ltd. by your side, you can stay rest assured for the safety of the crucial aspects of your business. Our solutions are known for durability and dependability.

Telecommunications

Aprmit Technologies provides a wide range of telecommunication products and services including TDM-PBX, IP-PBX, IP/Video Phones and Digital/ Analog Phone that helps organizations in boosting their performance responding quickly to their customer queries/concerns. Our telecommunication products are designed for corporate and government enterprises as well as big and small scale companies that are specifically searching for versatile, high-quality and cost-efficient products/ solutions to meet their

ever changing telecommunication needs. With our flexible, scalable and premium quality products, enterprises can achieve their business goals and fulfil their communication needs with minimal efforts. Upon the completion of the analysis of the customer requirements, we proceed to design a professional telecommunication diagram citing the execution plan. Upon its approval, we give you the freedom to pick from different user extensions including Digital/ Analog phones, IP phones, as per your communication system needs and demands.

Fire Fighting and Safety

Aprmit Technologies Pvt. Ltd. specialises in supplying sophisticated and premium quality fire alarm systems, fire suppression and building management systems to our clients. With our smart, well integrated and affordable fire detection, fire alarm, fire suppression systems and building management systems, you can improve your fire safety management as well as monitoring systems. We understand that legal issues and challenges that you may encounter when fire breaks out. That's exactly why we provide you with

best in class building management ,fire detection and fire suppression systems that allows you to speed up your response rate and avoiding risks associated with fire. Our fire safety services are initiated by designing a safety diagram, highlighting all the safety points and equipments required.

Networking

Effective networking systems allow organizations to add value to their business. With our Networking products and solutions including Structural cabling, active switching, wireless solutions and internet/network security systems, organizations can optimize their networks while minimizing their cost of operations. We help businesses in enhancing their performance by providing them with simplified, efficient and easy to manage networking products and solutions. This is carried out by designing the network diagrams and

highlighting the key areas. Our team of experienced network designers aid businesses in deploying, operating, optimizing as well as integrating the most effective networking systems. With us, organizations can share real time data and information over robust networks. Our wireless solutions enable you to seamlessly communicate and collaborate with your clients and partners without sticking to one place.

Data Center Solutions

Aprmit Technologies Pvt. Ltd. is the premier provider of Data Centers of robust, scalable and flexible solutions that allow enterprises to run and manage their mission critical data and applications with ease. We provide tier 3 and tier 4 data center solutions, deploying hardware within our client's data center that offer complete redundancy. With our tier 3 data center hardware configuration, clients can manage their maintenance works without impacting the servers' continuity.

With such solutions, enterprises can enjoy partial redundancy of up to 99.98%. On the other hand, we also offer tier 4 data center solutions, which impart the highest level of safety for an organization's data center, since it is built for withstanding floods, earthquakes, fires and floods and other serious incidents. The tier 4 data center architecture is fully robust as far as its cooling, electrical circuits and network is concerned, providing 99.99% availability. Our tier 4 data center solutions feature quite a few physical security aspects that protects an organization's data against virtual or physical intrusions.

Cyber Security Operations Centers (CSOC)

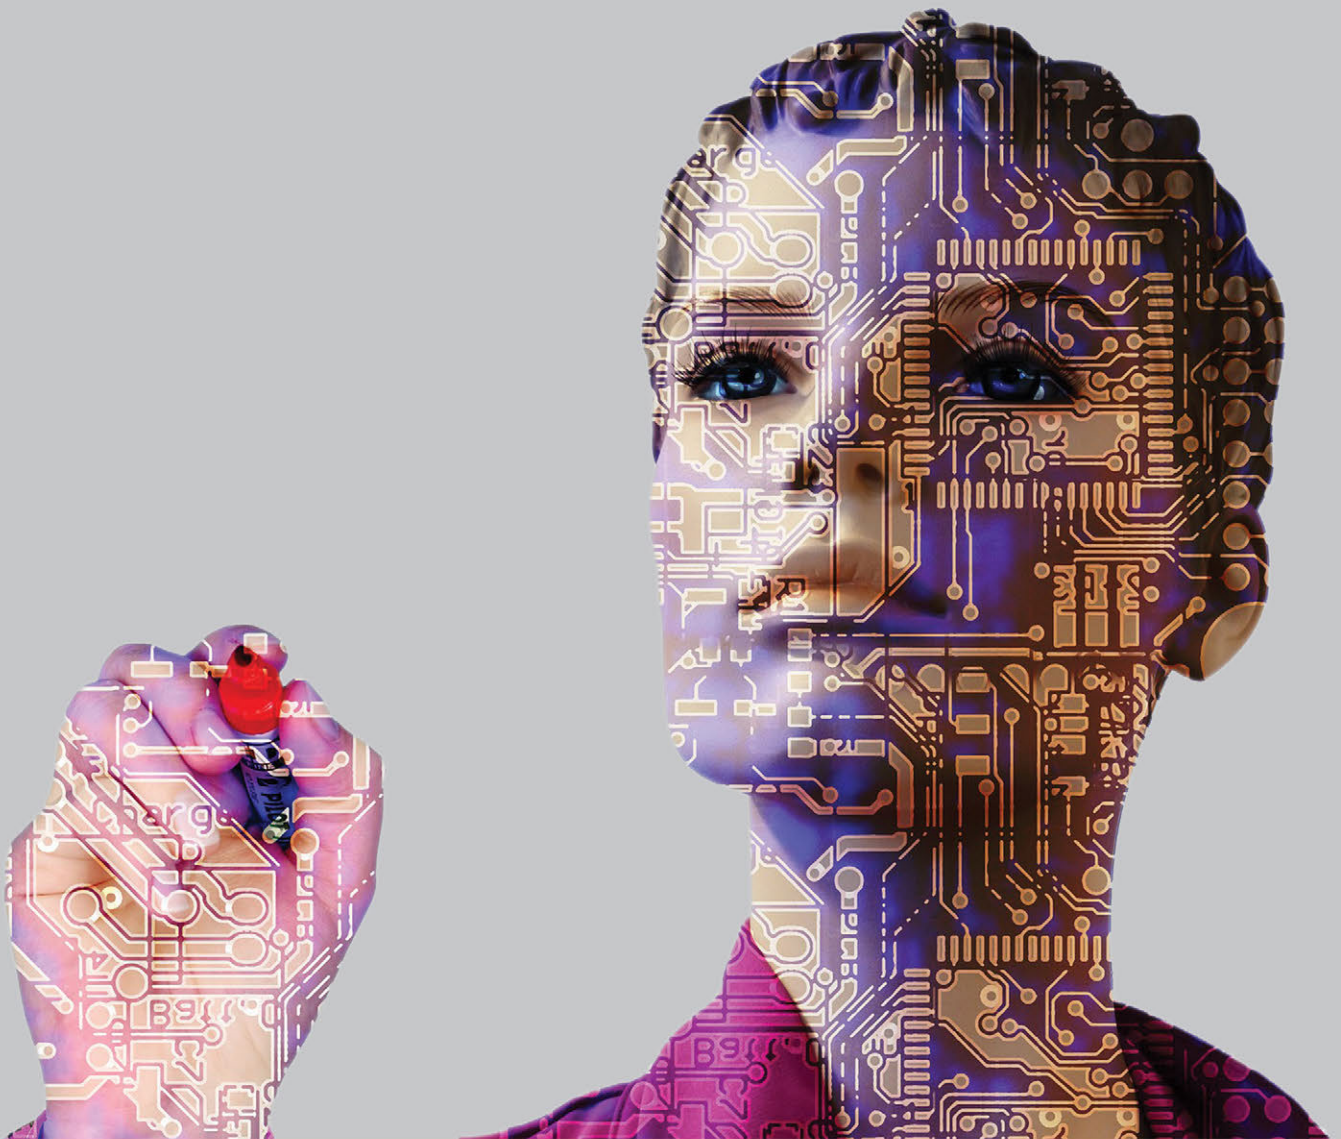

Cyber Security Operations Centres (CSOC) serve as the nerve centre of safety, and surveillance, offering end-to-end citizen protection, enhanced internal transparency, state-wide connectivity, privacy, and accessibility. A Cyber security operations centre (CSOC) is an essential business control aimed to protect ICT systems and support an organisation's Cyber Defense Strategy. Our overarching purpose is to ensure that incidents are identified and managed to resolution swiftly, and to maintain safe & secure business operations and services for

our clients. We propose a CSOC framework comprising of Log Collection, Analysis, Incident Response, Reporting, Personnel and Continuous Monitoring. Further, we at Aprmit, also focus on a Cyber Defense Strategy, supported by the CSOC framework.
